Concepts for Writing  
the  
Military Marching Drill

Texas Bandmasters Association Convention  
July 2017

## Concepts for Writing the Military Marching Drill

Music - primary in constructing a drill.

- \* Select music that challenges students but keep in mind their success
- \* Do not over-program
- \* Re-arrange music as needed for better flow and continuity
- \* Determine the amount of music needed (usually three marches)
- \* Memorize music to enhance marching learning and to reduce wasted rehearsal time

Getting started

- \* Decide what number of students will be marching. Factor in overall number of performers, instrumentation, potential eligibility, and alternate positions
- \* Field position - end zone entry or sideline entry
- \* Center band to the field for easier charting options (Allows for better blend and balance)
- \* Sideline marching might better accommodate small bands soundwise

Writing the drill to fit the music.

Symmetrical drills.

- \* Begin formations on both primary and secondary (major) phrases
- \* Makes sense to marchers when learning
- \* Is visually and aesthetically more pleasing to the layperson
- \* Is generally easier to perform music
- \* Students learn drill faster
- \* Allows for more time and attention to music and marching when polishing
- \* Easy to set up rehearsal points

Asymetrical drills.

- \* Formations begin based more on field positioning and specific drills
- \* Allows more flexibility in drill design
- \* More difficult to teach and learn
- \* More likely to create individual errors both marching and musically
- \* More likely to expose and/or create music weakness
- \* More difficult to polish
- \* Formations or band direction changes can occur anywhere in the music

Things to consider when writing a drill.

- \* Optimal length of a drill is six minutes, thirty seconds to seven minutes, fifteen seconds. This allows for time to polish and easily falls within time constrictions
- \* Use opposite direction turns to eliminate 'direction of horn' sounds.
- \* Use 'dead counts' or clicks to reposition a band for the next march and/or formation
- \* Try to not exceed four dead counts unless they are in conjunction with a specific formation set up. (Ex: clicks during an alternating 'to the rears' going from company fronts to a diamond formation)
- \* Use cadence during difficult marching manuevers
- \* Always consider time delay when splitting blocks and separating them
- \* Be very aware of specific music challenges (Ex: low brass runs) and where it occurs in the drill. Minimize or eliminate these passages from occurring at turns.

### Stacking a band (See chart)

- \* Position instruments to enhance overall band sound
- \* Stack to the press box
- \* Stronger players closer on the near side
- \* Keep in mind band balance when marching sideline to sideline
- \* Position percussion away from press box to achieve better balance
- \* Place brass towards center files in band
- \* Avoid placing a section all on one rank (Ex.) Placing all or most of the trombones or trumpets on one rank; though visually effective it negatively affects the flow of sound from that section thereby weakening the music performance (The primary exception is the bass horn section)
- \* Stack strong players front to back by files to help maintain a more secure sound through turns
- \* Stack the formation goal to goal first, then back feed to a fanfare position if the marching formations fundamentally change from the fanfare position

### Chart drills others can read

- \* Facilitates teaching your band
- \* Show specific formations
  - How to get into them and how to get out
  - How the formations are coordinated with the music
  - Exact positioning on the field
  - Rehearsal points
- \* List terms or abbreviations for reference purposes (Ex: TTR - to the rear; CM - countermarch, cad - cadence, etc.)
- \* List instructions on the chart beside formations and at the top of the page
- \* List the music that coordinates with the formations on any particular page
- \* Make yard line and press box positions clear
- \* Teach/explain the drill to the staff first

### Pyware charting

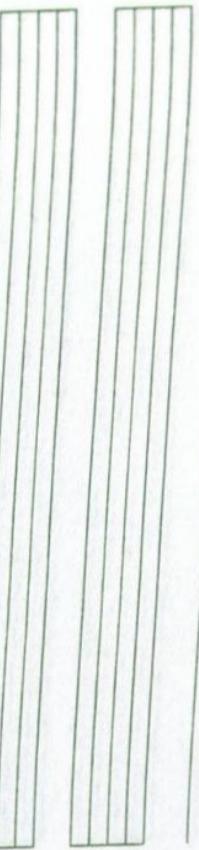

- \* Allows more flexibility in charting
- \* Aids in eliminating potential charting/marching problems quicker when rewriting
- \* Can expose discrepancies in teaching the drill versus what was actually written
- \* Showing chart to students will facilitate learning
- \* Aids other directors in understanding the chart for more efficient instruction time
- \* Any charting requires time, Pyware can be a much faster more effective method with practice

### Thoughts

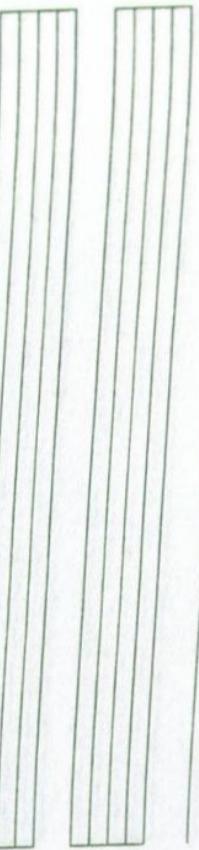

- \* It is easy to write a simple drill and it is easy to write a challenging drill but it is difficult to write the 'right' drill.
- \* The will to win is not nearly as important as the will to prepare to win.
- \* Utilize rehearsal time properly. Every teaching/learning moment counts - consider the time you waste.
- \* You can't teach them if you haven't got their attention.
